kryo

Note: A little bit of patience is demanded. Loudspeakers need some hours of operating time in order to be able to unfold their full potential. Due to the specific treatment of our broadband loudspeakers this could last somewhat longer than commonly expected. This could also depend on former storage conditions. All models are going to run properly for app. 50 hours before delivery. Within the first hours of playtime quite audible changes could be perceivable –some time will be necessary till the damping elements and the material grades of the chassis will reach their optimal mechanical properties.

With time passing by the suspension mechanism of the chassis becomes softer and slightly more moveable. The process and the tonal expansion could – depending on the model but especially the bigger ones – also last up to 400 operating hours.

All prices apply to pairs of loudspeaker and are included 19% VAT.

Handcrafted castings are available in matt finished black or RAL colours (basic price), with spikes on stainless steel flat washers. High-level tone dual-poles are inserted in aluminium mono block-cases (black matt). Special edition model as well as high-gloss varnish and inlays can be delivered on request.

Standard delivery time is 5 to 6 weeks, for special designed models approximately 8 to 10 weeks, subject to modifications.

All previous pricelists lose their validity. All goods remain our property until complete payment. The place of jurisdiction will be Vienna (as at 22.06. 2021)
